EXPERIENCE

Software Engineer - iOS Engineer

Jun 2025 – Present

The Washington Post

Washington D.C

- Built and shipped a One Day Pass in app, driving 100 purchases in the first 2 weeks across a 4-variant pricing test; deep work on Apple's StoreKit API, codebase payroll management, and coordinating efforts with backend, subscriptions, and identity teams.
- Owned features end-to-end from kickoff to release, working across product, design, marketing, and backend to align on requirements and navigate iOS constraints.
- Built personalized podcast sharing via AppsFlyer/OneLink deep links, including app-not-installed flows and a personalized listening UI for the recipient.
- Moved key parts of the app onto Iterable, enabling marketing to target users through push campaigns.
- Audited and fixed analytics gaps across multiple features to ensure accurate data.
- Led audio playback architecture for live and stitched personalized audio including multi-segment sequencing and CarPlay integration; debugged production playback and seeking issues.
- Served as release manager for iOS app releases and participated in on-call rotations, handling production incident triage and crash investigations.

Student Lecturer/Instructor

May 2024 – Jan 2025

George Mason University

Fairfax, VA

- Developed and assessed programming assignments, projects, and quizzes, teaching 20+ students critical skills in creating dynamic, responsive iOS applications, with high student satisfaction rate.
- Successfully introduced 20+ students to foundational iOS development technologies, resulting in a massive improvement in overall course comprehension and practical application of Swift UI, UIKit, and API requests.

Software Engineering Intern

Jun 2024 - Aug 2024

The Washington Post

Washington D.C.

- Engineered a targeting page for DevTools on the Ad Engineering team, improving ad monitoring efficiency and streamlining client communication across 5 departments using TypeScript and Node.js.
- Designed and implemented a system that deciphers and translates ad and article themes, reducing team miscommunication and facilitating faster decision-making processes.
- Developed analytical tools to enable teams to understand ad display patterns, leading to an improvement in brand safety and ad suitability by ensuring alignment for clients with relevant content.

EDUCATION

George Mason University

Fairfax, VA

Bachelor of Science in Computer Science

Aug. 2021 – May 2025

PROJECTS

ClassMate | Swift, Firebase, Open AI

Jun 2025 – Present

- Building a full-stack iOS marketplace application for college students to buy, sell, and connect within verified university communities.
- Developed core app architecture using MVVM to ensure modularity, scalability, and maintainability as features expand.
- Integrated Firebase services for authentication, database storage, and user-generated content workflows.
- Designing safe user interaction features including profile-based communication and controlled posting flows.

TECHNICAL SKILLS AND AWARDS

iOS: SwiftUI, UIKit, MVVM, Combine, StoreKit 2, AVFoundation, Core Data, REST APIs, Iterable, Airship, AppsFlyer

FullStack: Firebase, Node.js, TypeScript

Languages: Swift, Java, Python, TypeScript, JavaScript, SQL, Kotlin

Frameworks: ReactJS, NodeJS, Redux, ThreeJS, NextJS, SciKit, Open AI, Material-UI, KMP

Tools: Xcode, Git/GitHub, Postman, Docker, Linux, AWS, Google Cloud, Proxyman, TestFlight

Libraries: React, Next.js, Pandas, NumPy, Matplotlib

Awards: Eagle Scout - Boy Scouts of America (2021), Codepath Intro to IOS Development Certificate (2024)
